

Program Series Warehouse Management *flexi log*®

Customer Advantages

In today's globally integrated, highly competitive market environment, having a flexible logistics strategy linked to your business imperatives is of crucial importance to a company's overall success and achievement of its business objectives. Expanding costs, increasing demands for throughput and productivity, also the short timeframe in the Just In Time process require companies to reassess their approach and look for a change. With exccLogistics new flexible approach for Software Warehouse Management — *flexi log*® - there is a solution.

With the assistance of *flexi log*® you, as the service provider, are able to present your customers with an optimal support for their entire logistics sector. Whether you want to supply clients with a warehouse facility with a truck and a warehouse employee, or if you run a fully automated Just In Time warehouse system, we support you with a software perfectly customized to the application field and all additional services.

Multi - Client Capability

You are able to manage as many clients in your warehouse as you want with just one particular software: The Enterprise Edition or Data Center Edition

Functionality

Track your inbound goods and supplier vouchers and book them automatically or manually after inbound check. Let the system choose the bin locations or individually have the user affirming them.

Manage your transit items and crossdockings - even from various warehouse occupants together or spatially separated. Realize open bonded- and secure stock areas and book declared goods in free areas afterwards.

Create flexible billing statements for your customers and provide data through various interfaces.

Productivity

Simplify your work by automatically importing the entry and outflow statements from sub systems like SAP/IDOC or any ASCII interfaces. Keep track off your data with sophisticated reports and screen displays. Enjoy the benefits of maintenance and support services that you receive from our flexible team of specialists.

Flexibility

In the event the standards are not entirely covering your needs, we can work out a customized concept for you of how to improve your work flow, increasing efficiency and productivity. We are able to offer, realize and conceptualise individual printouts, specific interfaces or multilingual applications.

It is not about simply outlining your warehouse management set-up, it is about outthinking it!

Configuration Level and Pricing

The Warehouse Management Software *flexi log*® is available in several configuration levels:
